

# CareLoop

*Patient care that follows through*

**Team 4** | Neo Tiwari

A doctor in a white lab coat with a stethoscope is sitting at a desk, looking at a laptop screen. The background is slightly blurred, showing a window with blinds and a bulletin board.

# Problem Analysis

# Problem Analysis

Clearwater Ridge faces challenges in care coordination, follow-up continuity, and winter resilience

## Care Coordination

Follow-ups rely on **manual, fragmented processes**, making missed appointments easy to lose and hard to resolve

## Follow-Up & Communication

**No consistent way** to re-engage patients after missed visits, increasing delays and preventable escalation.

## Winter Travel Constraints

Winter storms and highway closures **disrupt in-person care**, with limited virtual options to maintain continuity.

When appointments are missed and winter conditions limit access.  
**How can Clearwater Ridge ensure patient care continues?**

A doctor in a white lab coat with a stethoscope, sitting at a desk and looking at a laptop screen.

# Strategic Analysis

# Key Strategic Constraints

Strategic Constraints in Rural Care Coordination

Designing care coordination that works when access breaks down

## Strategic Factors

### What Makes Care Coordination Viable?

- Limited staff capacity
- Manual follow-up processes
- Winter-disrupted access

## System Requirements

### What Must the System Provide?

- Closed-loop follow-up
- Virtual-first access
- Minimal training

## System Realities

### What Defines the Care Environment?

- Seasonal Isolation
- Small population scale
- High cost of escalation

# Key Strategic Constraints

Strategic Constraints in Rural Care Coordination

Designing care coordination that works when access breaks down

## Strategic Factors

### What Makes Care Coordination Viable?

Limited staff capacity  
Manual follow-up processes  
Winter-disrupted access

## System Requirements

### What Must the System Provide?

Closed-loop follow-up  
Virtual-first access  
Minimal training

## System Realities

### What Defines the Care Environment?

Seasonal Isolation  
Small population scale  
High cost of escalation

# Key Strategic Constraints

Strategic Constraints in Rural Care Coordination

Designing care coordination that works when access breaks down

# Existing Care Coordination Approaches Matrix

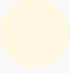

Why do existing approaches fail to meet system requirements?

	Closed-Loop Follow-Up	Winter-Resilient Access	Staff Scalability	Reliability Under Disruption
Manual Staff Follow-up				
In-Person-Only Care Model				
Basic Reminder Systems				
Status Quo (No change)				

# Proposed Approach Matrix

Why do existing approaches fail to meet system requirements?

	Closed-Loop Follow-Up	Winter-Resilient Access	Staff Scalability	Reliability Under Disruption
Manual Staff Follow-up				
CareLoop				
Basic Reminder Systems				
Status Quo (No change)				

# Strategic Insight

Care breakdowns in rural communities are driven by failed follow-up, not lack of care availability

## Meet Ethan

Clearview Ridge Resident: Forestry

### Ethan's Concerns

1

missed appointment **delays care for weeks**

50+

patients managed by 1 **care coordinator**

**\$200 → \$15,000**

cost jump from **missed follow-up to escalation**

How can we better address the needs of citizens like Ethan?

# Recommendation

Enabling a Scalable, Virtual-First Operating Model

# Proposed Operating Model

A deeper dive into the core components

## High Level Overview

- Deploy a **closed-loop, virtual-first appointment coordination system** that standardizes pre-appointment check-in for patients and gives staff real-time visibility + automatic follow-up triggers.

## Core Capabilities

- **Two dashboards** (Admin + Patient) + Integration with existing EMR Systems + automated multi-channel check-in (Web / SMS / AI Call) that ensures no appointment can be missed without resolution.

## Why is this the Optimal Solution?

**Replaces manual coordination**

**Automated patient engagement**

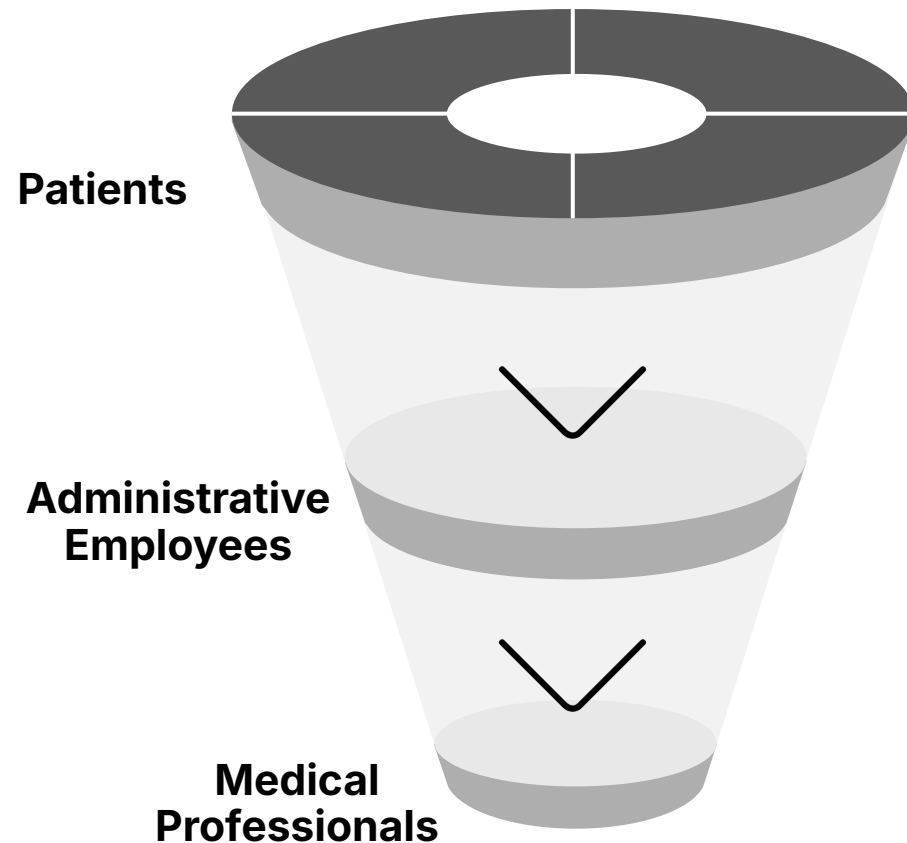

**EMR auto-sync**

**Standardizing pre-appointment screening across web/SMS/call creates a scalable operating model for continuity, independent of travel constraints.**

# Integrated System

Enabling a standardized, end-to-end operating model for appointment readiness

## Patients

- Patients receive a **single, simple check-in path** via **web, SMS, or AI call** to **confirm** appointments and complete **pre-appointment questions** in their preferred language/channel.

## Administrative Employees

- Staff use a **real-time dashboard** synced to EMR to **configure outreach**, run **fallback reminders**, flag **no-shows/cancellations**, and **trigger rescheduling**, all with clear status indicators.

## Medical Professionals

- Clinicians receive **structured, pre-validated intake summaries** before the visit → 15% more time for decisions.
- Integration with existing EMR platforms

# Decision Criteria

Assessing CareLoop against Clearwater Ridge's core operating constraints

## Care Coordination

Eliminate manual tracking gaps by giving staff a single dashboard with **real-time appointment status**

## Follow-Up & Communication

**Multi-channel outreach** (web / SMS / AI call), with configurable timing + fallback reminders to maximize completion.

## Winter Travel Constraints

**One-click "switch to virtual"** + automated patient notification ensures **care continues** when highways close or travel becomes unsafe.

## What Success Looks Like

### Key Outcomes

#### Appointment readiness:

Higher confirmation + completed intake before visit; fewer day-of surprises

#### Fewer missed visits

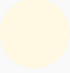

No-shows/cancellations auto-flagged + reschedule prompts prevent drop-offs

#### Staff time returned

Less manual calling/chasing; coordination handled by automated system

# Proposed Approach Matrix

Why do existing approaches fail to meet system requirements?

	Closed-Loop Follow-Up	Winter-Resilient Access	Staff Scalability	Reliability Under Disruption
Manual Staff Follow-up				
CareLoop				
Basic Reminder Systems				
Status Quo (No change)				

# Why CareLoop Outperforms Existing Approaches

A single system that closes the loop, scales staff capacity, and stays reliable under winter disruption

## A Single Source of Truth

APR/EMR sync + real-time visibility → **fewer blind spots than paper/spreadsheets.**

## Replacing Chasing with Automation

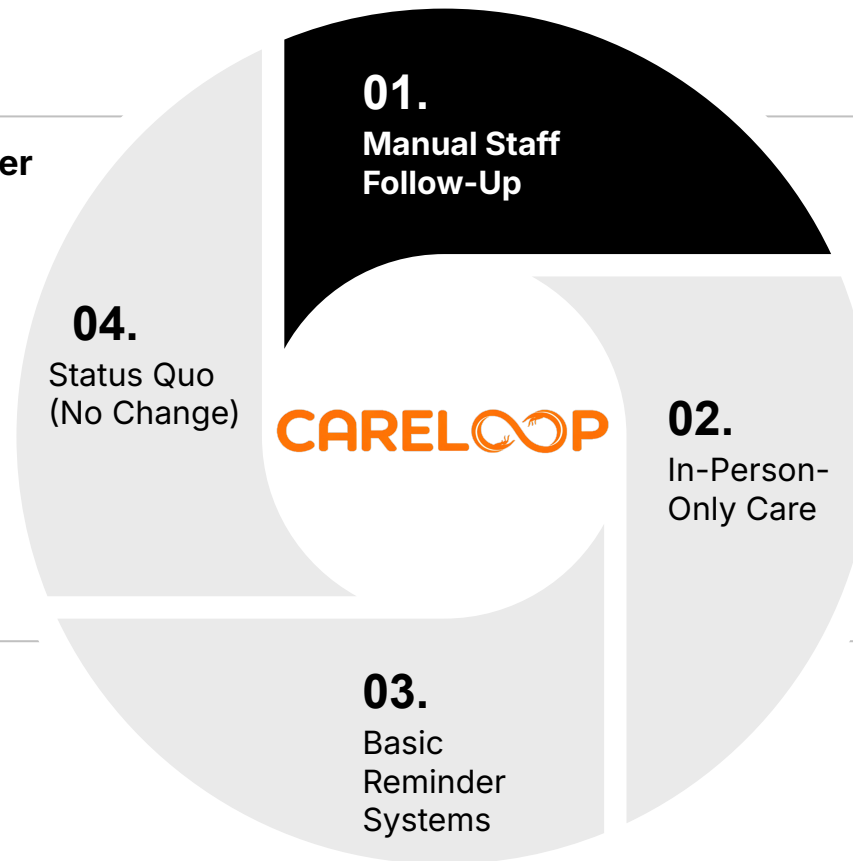

Dashboard status + auto reminders + no-show flags → **fewer drops and less staff time.**

## Turning Reminders into Completion

Patients confirm + **complete intake** (web/SMS/AI call) and the system syncs results back to staff.

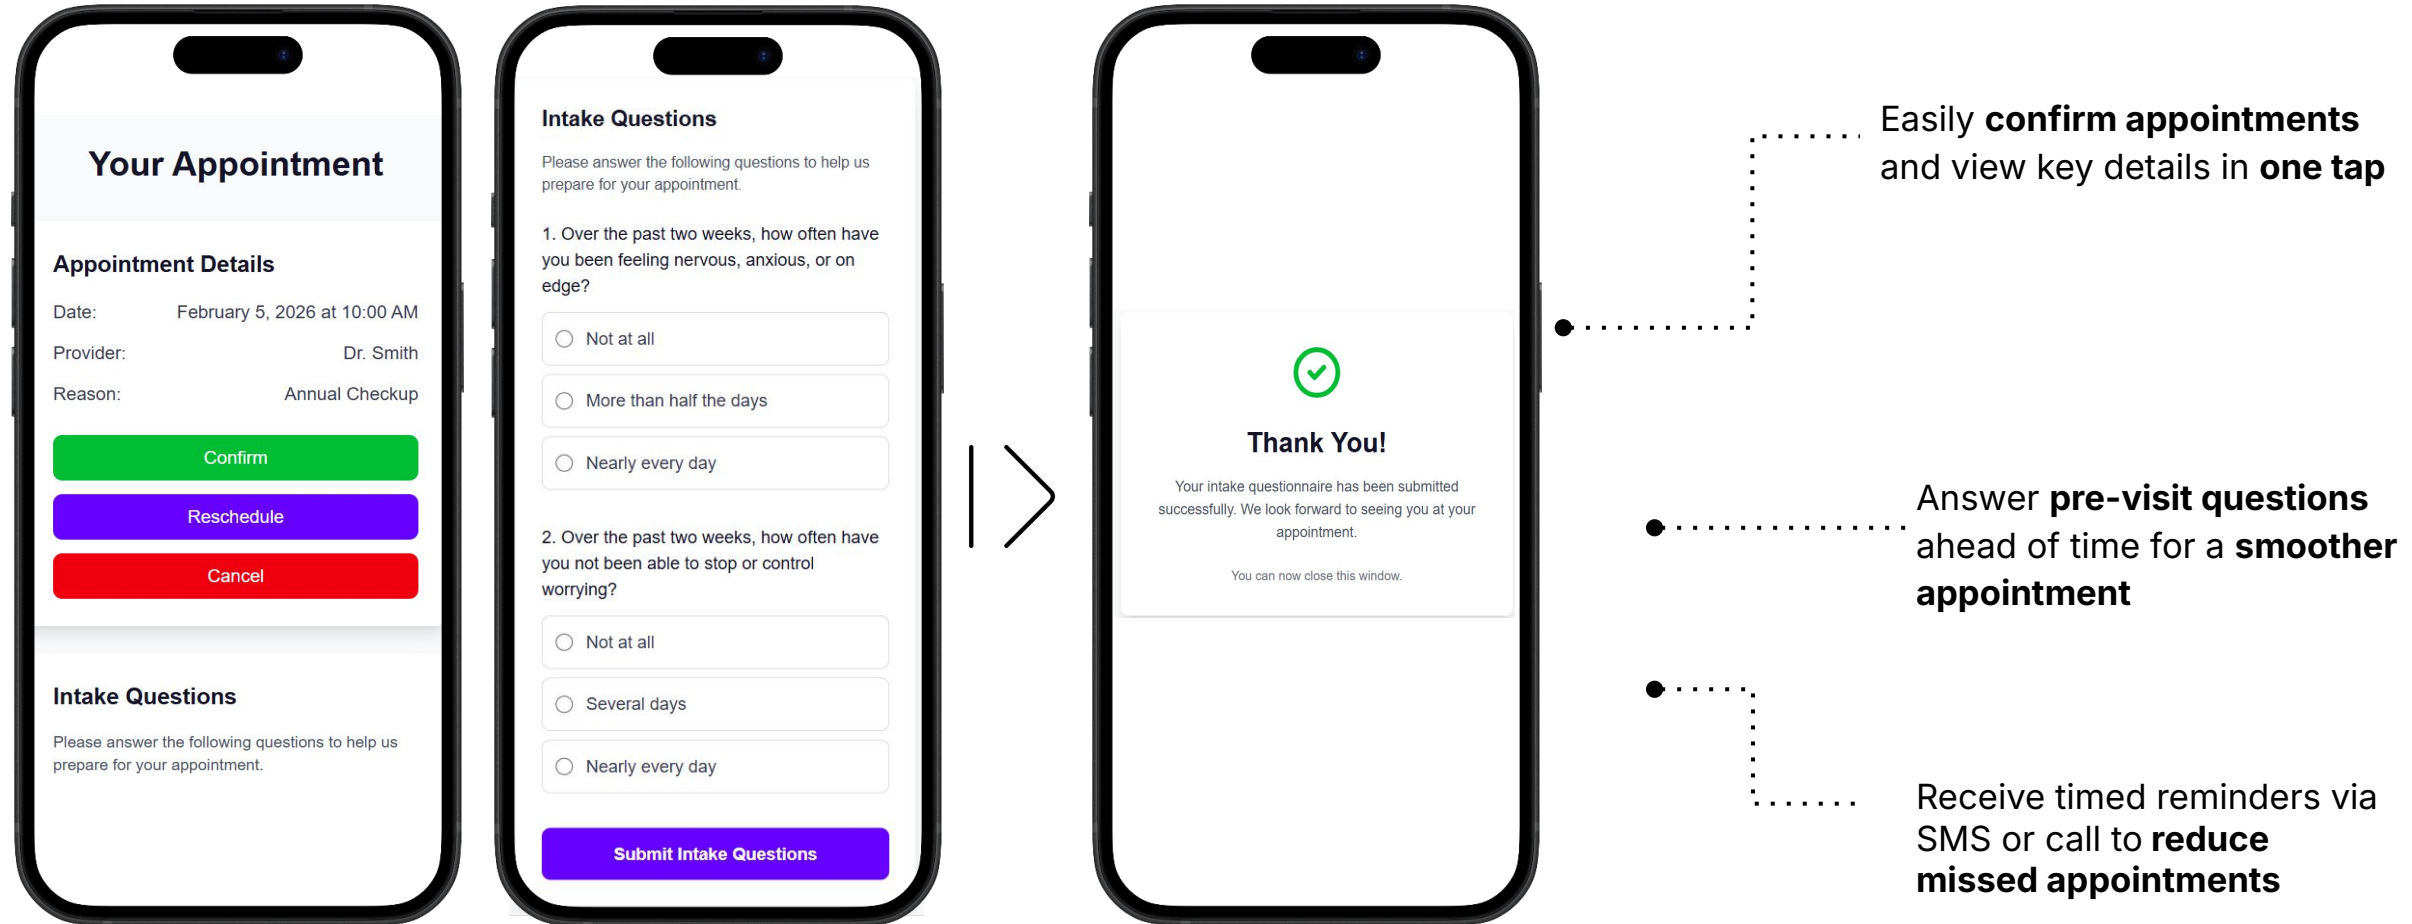

## Keeps the Process Intact when Visits Shift

One-click “switch to virtual” + instant patient notification → **continuity without rescheduling chaos.**

# CareLoop Experience: Patient

## Standardizing Pre-Visit Readiness

# CareLoop Experience: Administrator

Track confirmation status and take action at scale

## Appointments Dashboard

# Implementation

# Implementation Timeline

Integration with EMR to Begin April 2026

# Technical EMR Integration Plan

Ensuring secure, efficient, and seamless adoption within payroll platforms.

## Request API Keys from EMR Vendor

Secure APIs sync appointment schedules and patient data **without disrupting** clinic workflows.

## Setup EMR Connection in CareLoop

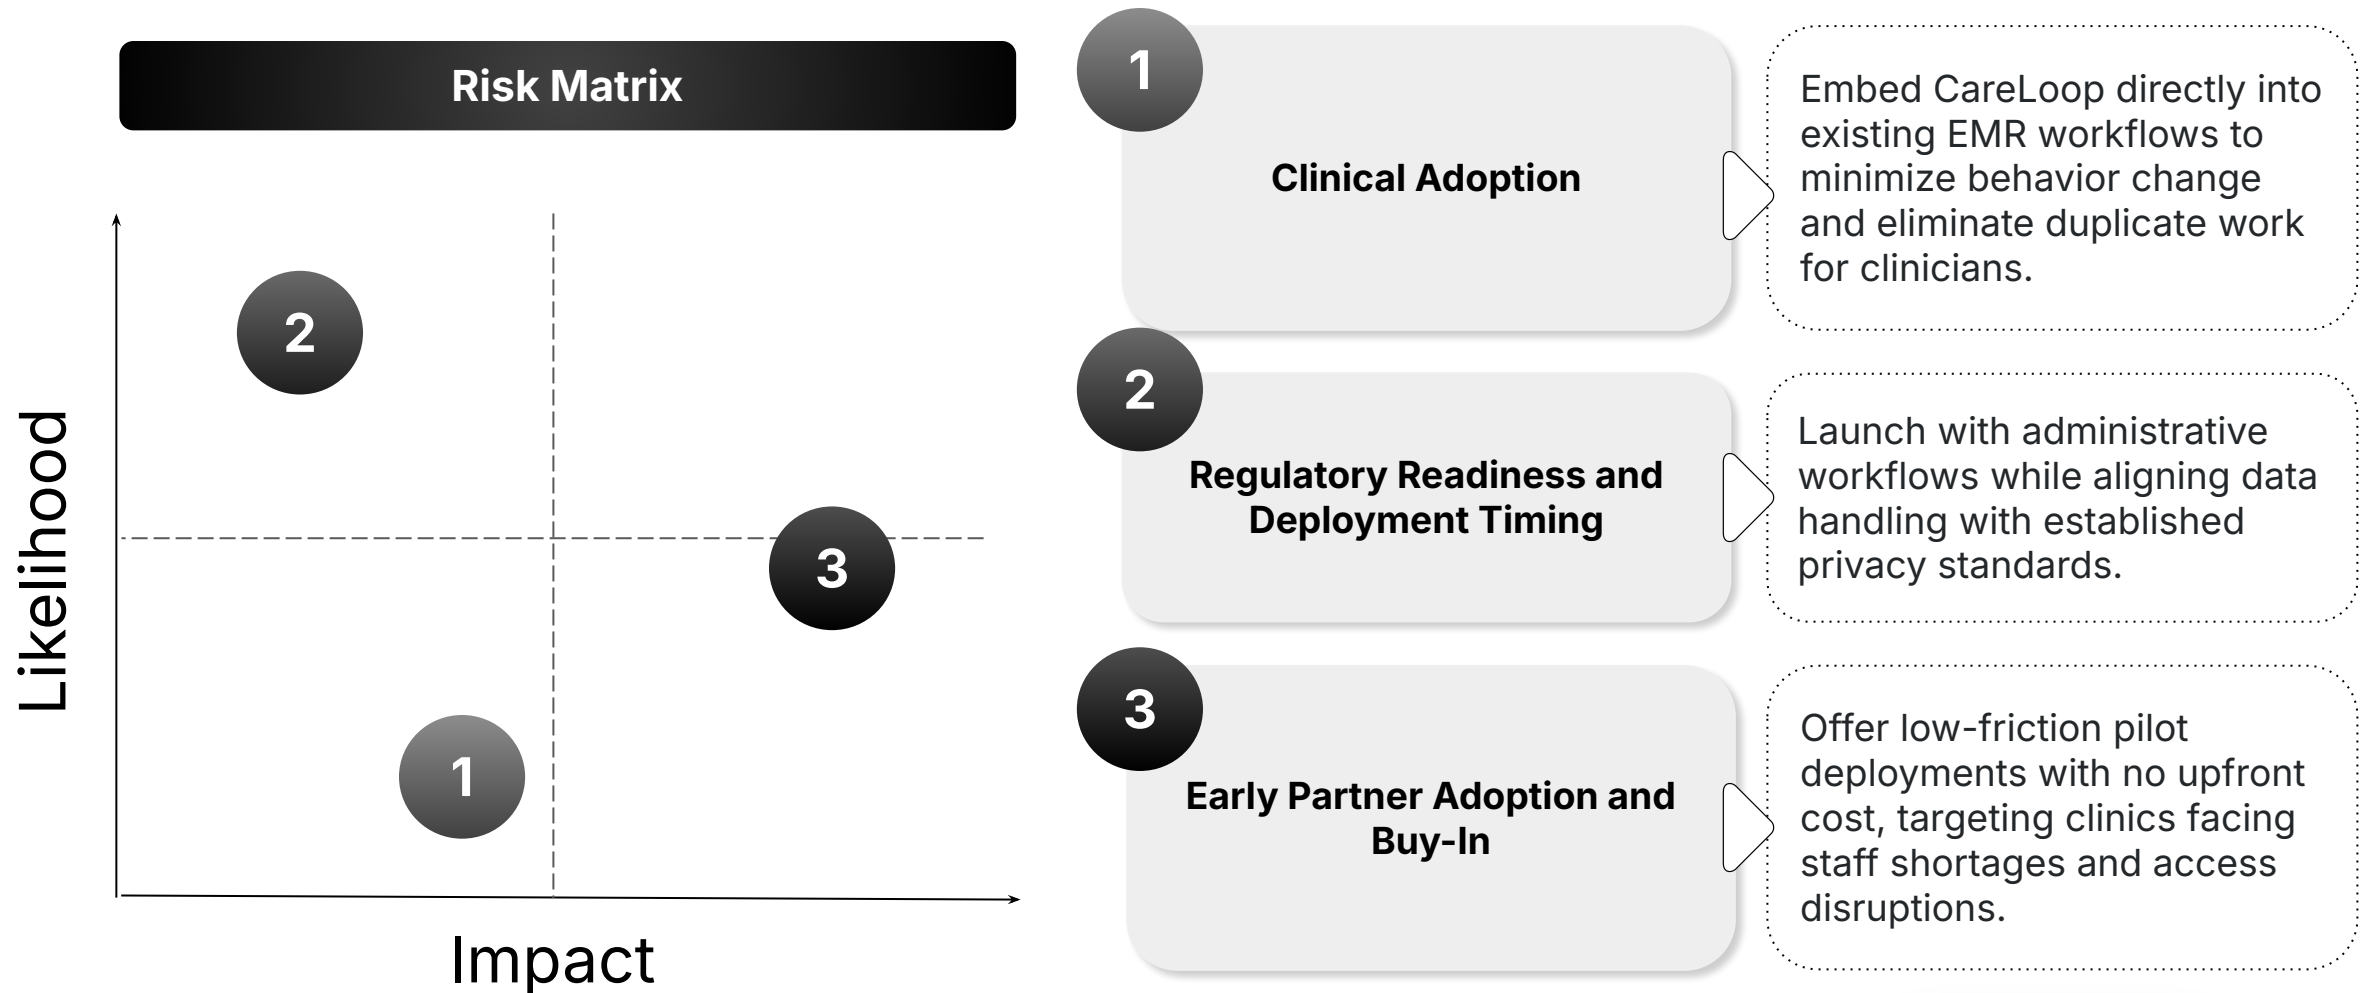

Clinics access a **simple setup** dashboard to manage reminders, intake flows, and follow-ups.

Automatically imports clinic day-sheet from EMR

Automatically exports patient intake responses into the EMR

# Risks and Mitigations

Overcoming regulatory, partnership, and market challenges for successful US expansion

# Finances - Cost Projections

Healthy unit economics supported by a lean fixed-cost base

Cost line item	Year 1	Year 2	Year 3	Notes / formula
Implementation coordinator	\$4,250	-	-	One-time clinic rollout support.
EMR/APR integration & configuration	\$10,000	-	-	Interface + mapping + testing.
Security & privacy assessment	\$7,000	-	-	PIA/TRA + pen test.
Hardware (tablets/kiosk)	\$1,600	-	-	Units × cost per unit.
Training & change management	\$2,500	-	-	Quick guides + training sessions.
Legal / contracting	\$2,000	-	-	Policies + data sharing agreement.
Contingency (one-time)	\$2,735	-	-	Buffer for integration surprises.
Cloud hosting (App Service + DB) - annualized	\$2,432	\$2,432	\$2,432	Azure App Service + Cosmos DB converted to CAD.
Other cloud (monitoring/backups/logs)	\$1,200	\$1,200	\$1,200	CAD/month × 12.
Phone numbers + messaging compliance	\$324	\$324	\$324	CAD/month × 12.
Variable comms (SMS + AI call minutes)	\$5,399.80	\$5,399.80	\$5,399.80	Appointments × workflow share × variable cost/appointment.
Support & maintenance	\$10,500	\$10,500	\$10,500	Annual support contract / part-time DevOps.
Security/compliance (ongoing)	\$2,500	\$2,500	\$2,500	Annual privacy/security activities.
Misc recurring	\$1,500	\$1,500	\$1,500	Domain, email service, incident buffer.
<b>Total recurring operating cost</b>	<b>\$23,855</b>	<b>\$23,855</b>	<b>\$23,855</b>	Sum of reoccurring costs
<b>Total cost (one-time + recurring)</b>	<b>\$53,940</b>	<b>\$23,855</b>	<b>\$23,855</b>	Year 1 should be ≤ first-year budget cap. Year 2-3 should be ≤ ongoing cap.
<b>Budget cap</b>	<b>\$60,000</b>	<b>\$25,000</b>	<b>\$25,000</b>	From case prompt.
<b>Headroom (cap - total cost)</b>	<b>\$6,060</b>	<b>\$1,145</b>	<b>\$1,145</b>	Positive = within cap.

# Finances - Impact & ROI (Avoided Costs)

<b>ROI % (Net benefit / Total costs)</b>	<b>48.2%</b>	<b>235.1%</b>	<b>235.1%</b>	<b>135.9%</b>

Questions?

# Appendices

# Finances - Inputs

## Key Considerations for Profitability and Growth

Core volumes & adoption		
Population (residents)	1,800	Case population estimate (input).
Scheduled appointments per year (eligible for developed system)	7,200	Base-case volume to size SMS/call usage (Assumption: 32 appointments per day * 4.5 days a week * 50 Weeks a year (12.5 Min per appointment)
% appointments using pre-appointment screening	85%	Portion of appointments routed through web/call check-in.
% check-in via web (client dashboard)	20%	Remainder handled by AI call/SMS.
% check-in via AI call	80%	Should sum to 100% with web rate.
Avg AI check-in call length (minutes)	4.0	Includes questionnaire + confirmation + recap.
% appointments needing fallback reminder call	40.0%	Only if not confirmed on the 1st attempt
Avg reminder call length (minutes)	1.0	Short reminder call
SMS sent per appointment (avg)	5.0	AI pre-notice + 24h reminder + 6h fallback + 1 hr fallback
Unit costs (usage)		
FX rate (CAD per 1 USD)	1.36	Assumption used to convert Azure/Twilio/ElevenLabs USD pricing to CAD, as of Feb 1, 2026
Twilio SMS cost (CAD per SMS)	\$0.01	Given assumption: 1 cent CAD per SMS.
Twilio voice cost (USD per minute)	\$0.01	Given assumption: 1 cent USD for calling (treated as per-minute).
ElevenLabs voice AI cost (USD per minute)	\$0.16	Midpoint of 15–17 cents USD/min
Phone numbers + messaging compliance (CAD per month)	\$27.00	Includes phone number rental + messaging compliance/admin fees (Twilio).
Cloud & operations (recurring)		
Azure App Service (USD per month)	\$99.00	Azure App Service P2 Premium Subscription
Azure Cosmos DB (USD per month)	\$50.00	Cosmos DB Subscription
Miscellaneous cloud (CAD per month)	\$100.00	Monitoring, backups, storage, logs (estimate).
Support & maintenance (CAD per year)	\$12,000	Part-time DevOps + support contract (estimate).
Security/compliance ongoing (CAD per year)	\$2,500	Annual privacy/security activities, audits, key rotation, etc.
Miscellaneous recurring (CAD per year)	\$1,500	Domain, email service, monitoring alerts, incident response buffer.

# Finances - Inputs

## Key Considerations for Profitability and Growth

One-time implementation / development costs		
Implementation coordinator (one-time)	\$4,250	Clinic onboarding & workflow rollout. (est: \$53 per hour * 80 hours)
EMR/APR integration & configuration (one-time)	\$10,000	FHIR/HL7 interface, data mapping, testing (estimate).
Security & privacy assessment (one-time)	\$7,000	PIA/TRA, pen test, threat modeling (estimate).
Hardware TV/Laptop/kiosk (units)	2	Tablets for nurses + patient kiosk (estimate).
Hardware cost per unit (CAD)	\$800	Case range \$500–\$800 per unit.
Hardware total (CAD)	\$1,600	Calculated
Training & change management (one-time)	\$2,500	Staff training, quick guides, scripts (Estimate: (\$53+\$30)*30 hours)
Legal / contracting (one-time)	\$2,000	Data sharing agreement, vendor contract, policies (estimate).
Miscellaneous Buffer (% of one-time)	10.0%	Buffer for integration surprises
Case budget constraints (Given)		
Max first-year budget (CAD)	\$60,000	Constraint from case prompt.
Max ongoing operating cost (CAD / year)	\$25,000	Constraint from case prompt.
Discount rate (for NPV)	8.0%	Used only in ROI sheet
Calculated KPIs		
All-in AI call cost (CAD per minute)	\$0.23	(Twilio voice + ElevenLabs) × FX.
Expected variable cost per appointment (CAD)	\$0.88	SMS + expected AI minutes (check-in + reminder).

<b>Total recurring operating cost</b>	<b>\$23,855</b>	<b>\$23,855</b>	<b>\$23,855</b>	Sum of reoccurring costs
<b>Total cost (one-time + recurring)</b>	<b>\$53,940</b>	<b>\$23,855</b>	<b>\$23,855</b>	Year 1 should be ≤ first-year budget cap. Year 2-3 should be ≤ ongoing cap.
<b>Budget cap</b>	<b>\$60,000</b>	<b>\$25,000</b>	<b>\$25,000</b>	From case prompt.
<b>Headroom (cap - total cost)</b>	<b>\$6,060</b>	<b>\$1,145</b>	<b>\$1,145</b>	Positive = within cap.

# Finances - Impact & ROI (Avoided Costs)

## Assumptions & Avoided Costs

### Baseline failure rates (assumptions)

Missed appointment rate (of eligible appts)	12.0%	Base-case fraction of eligible appointments missed/cancelled without resolution.
Reduction in missed appointments with closed-loop follow-up	50.0%	Expected improvement from automated reminders + rescheduling triggers.
Preventable emergency hospitalizations per year (baseline)	2.0	Events attributable to follow-up breakdowns
Reduction in preventable hospitalizations	25.0%	Fraction avoided by earlier follow-up & escalation.
Emergency medical airlifts per year (baseline)	0.50	Estimate: 1 airlift every 2 years
Reduction in airlifts	20.0%	Fraction avoided via improved follow-up.

### Unit costs (from case prompt)

Cost per missed appointment (CAD)	\$200	Case estimate.
Cost per preventable emergency hospitalization (CAD)	\$10,000	Midpoint of \$8k–\$12k range in case.
Cost per emergency airlift (CAD)	\$15,000	Case estimate.

### Calculated annual avoided costs

Eligible appointments per year	6,120	Appointments × workflow share.
Missed appointments avoided (count)	367	Eligible appts × missed rate × reduction.
Savings from missed appts (CAD)	\$73,440	Avoided count × unit cost.
Savings from prevented hospitalizations (CAD)	\$5,000	Baseline hosp × reduction × unit cost.
Savings from avoided airlifts (CAD)	\$1,500	Baseline airlifts × reduction × unit cost.
Total annual avoided costs (CAD)	\$79,940	Total savings estimate.
Annual operating cost (CAD)	\$23,855	Pulled from Cost_Model: total recurring cost in Year 2.
Net annual benefit (Savings - OpEx)	\$56,085	Positive means annual ROI is positive.
One-time implementation cost (CAD)	\$30,085	Year 1 total cost - Year 1 recurring (approx one-time).
Simple payback (years)	0.54	One-time / net annual benefit.
